Runs on Microsoft Dynamics™ GP

AMI AutoAGENT ERP

AMI's **AutoAGENT ERP** solution is a total turn-key business process productivity solution for automotive and other repetitive manufacturers. **AMI AutoAGENT ERP** combines over 18 years of supply chain management experience, with Microsoft Dynamics™ GP, delivering the most comprehensive role-based resource planning solution available.

AMI and Microsoft Dynamics solutions seamlessly connect business systems throughout all departments with the personal productivity tools your people already know. This helps your finance people keep the money flowing through the system smoothly. It allows your operations people to work collaboratively and efficiently with one another and your supply chain partners. It also gives your sales and marketing team access to the information it needs to make each customer a repeat customer.

Bottom line—with AMI and Microsoft Dynamics solutions, your people are provided with the technology tools that they are comfortable with so they can work to their full potential.

CUT COSTS AND IMPROVE OPERATIONS

AMI AutoAGENT ERP enhances the flow of information throughout your company. As a result, the accuracy and the speed of your production is increased allowing you to do more with less. This translates into more profitable operations without sacrificing quality, delivery, or price. Here are just some of the benefits you will experience after implementing AMI AutoAGENT ERP:

- Enhance your environment** The AMI AutoAGENT ERP business solution is built on Microsoft .NET technology and is seamlessly integrated with Microsoft Dynamics GP. These solutions work like and with familiar Microsoft software, which means less of a learning curve for your people, so they can get up and running quickly and focus on what's most important for your business.
- Less data entry and errors** With AMI AutoAGENT ERP, all of your company's information is organized into one seamlessly integrated system. There is no need for re-keying of information by different departments and there is less need for manual paperwork. This greatly reduces the potential for errors.
- Cut operations Costs** Key Performance Indicators allow decision makers insight into what is going right or wrong within their demand production environment. AMI AutoAGENT ERP provides historical and real-time visibility into these indicators. Problems can be identified and adjustments can be made sooner rather than later, with confidence.
- Increase throughput** AMI AutoAGENT ERP monitors resource availability. As demand is generated, resources are automatically allocated. Production is given visibility to potential bottlenecks allowing for appropriate adjustments to scheduling. This creates greater efficiency while reducing downtime and overtime.
- Value delivered** When a business management solution works the way your current technology works, it fits easily and seamlessly into your existing systems and helps you maximize your technology investment. Software that's roles-based and targeted around the specific jobs people do can provide tremendous value and insight because it:
- Is familiar, helping reduce the time required to learn how to use it, and freeing up time to focus on what matters most.
 - Fits with your systems, helping to maximize your investment in Microsoft technology.
 - Fuels your business productivity, automating your business-critical operations and adapting to fit into your type of business, helping to ensure the most relevant insight.
 - Helps enable confident decision making, providing you with more complete insight across your organization.
